83894 metal interlock switches 83894121 / 83894131 3-pole Part number 83894121

- Monitoring of moving guards for machines with a stopping time which is greater than the time taken to access the danger zone
- Locked by removing the voltage, unlocked by applying voltage to the electromagnet
- Metal bodies and heads
- Heads have 4 possible positions at $90^{\circ}$
- Positive opening contacts

Type 838941 safety switches are fitted with an electromagnet for locking/unlocking the guard.
With the guard locked, the force required to remove the key is $\mathbf{2 0 0}$ daN.
In addition to the 3-pole contact element actuated by the key, 838942 limit switches also have a positive break type "NC + NO" contact element, actuated by the electromagnet. The "NC" contact is integrated in the machine safety circuit, and the "NO" contact indicates the position of the electromagnet.

Type 838941 safety switches are supplied with a key-operated lock which can be used to unlock the moving guard, bypassing the electromagnet.
Unlocking using a key-operated lock is recommended in the following cases :

- mains failure
 The locking mechanism for standard devices allows the key to be removed in the "LOCK" and "UNLOCK" positions.

## Power supply for the electromagnet on 838941

The electromagnet for type 838941 safety switches runs on D.C. and is therefore particularly reliable.
As it is protected by a bridge rectifier A.C. or D.C. supplies can be used ( $24 \mathrm{~V}, 48 \mathrm{~V}, 120 \mathrm{~V}$ or 230 V ).
